Steelgate Quick Install Guide

Steelgate Quick Install Guide

This guide will help you get up and running with your new software by walking you through a basic installation.

To install Steelgate:

1. To begin, you should have received a download link for your version of the software in the activation email you received. If not, contact our support team at support@steelgate.com with your username.
2. Double-click the installation file (example: **Steelgate_executive_14.5.24.exe**) to begin the installation. The language selection screen appears. English is selected by default.
3. Click the appropriate language and click **Next** to proceed. There will be a short wait as the installer loads required information. The Welcome screen appears. Should you require a language that is not listed, please contact support.
4. Click **Next** to proceed. The End-User License Agreement (EULA) appears.
5. Review the agreement and check the "I accept the terms in the License Agreement" box. This is required to continue. Click **Next** to proceed. The Typical or Custom Installation page appears.
6. The vast majority of users will not need to run a custom installation, so leaving Typical selected is recommended. Click **Next** to proceed.
7. You will now be asked to wait while the Setup Wizard installs the software. This process takes from 1-5 minutes, depending on your system. You also have the option to cancel the installation at any time should you need to for any reason. When complete, the Setup Complete page appears.
8. Click **Finish** to exit the Setup Wizard.
9. Launch Steelgate. The first time you do, you will be asked to enter your server name, username and password you have selected during the sign up wizard.
10. Click **OK** to acquire the license, restart the program and your software is ready!
